

SurgeGuard™ Power Quality Program

Whole House Protectors

The **first stage** of our comprehensive program involves the installation of a device designed to stop lightning and other surges from entering your home and damaging your appliances.

The **Surge Diverter** defends your home at the electric service entrance against power surges up to 300,000 amps. This meter adapter will be installed by a Crawford Electric Cooperative representative, to protect against most surges originating outside the home.

In cases where the **Surge Diverter** cannot fit the meter base or the meter base exceeds 200 amps, protection is still available through a device wired directly into your electric meter panel or meter base. For your convenience, both devices are available in a monthly lease plan.

\$4.95 MONTH

Surge Protectors

The second stage of our **SurgeGuard™ Power Quality Program** involves the use of surge suppression strips inside your home. These strips, which you purchase and install depending on your needs, protect sensitive home electronics such as portable phones, television and stereo equipment and home computers.

SYG-1FF2 Security for any equipment connected to a telephone line, such as portable phones, fax and answering machines. **\$27.95**

SYG-8TAC-2 If your TV/VCR is connected to a satellite dish with external antenna/CATV, guard the setup with this 8-outlet strip. Protects one telephone line and two coaxial cables. . . **\$69.95**

SYG-6FN This 6-outlet wall block surge protector is designed for multiple uses. **\$16.95**

SYG-8T2 Perfect for home offices, Internet users, and small businesses. Use anywhere two telephone lines are utilized. **\$46.95**

SYG-7C 7-outlet plug-in strip; protects one coaxial cable. **\$41.95**

SYG-120/240TC These devices protect well pumps from surges up to 75,000 amps. They're hard-wired and can be installed in high-moisture environments, including most well heads. . . **\$44.95**

SYG-7S Provides 7-outlets of protection for multiple uses. **\$24.95**

SYG-7TA1 Versatile surge protection for equipment using a phone line connection, such as a computer work station with modem. **\$29.95**

SYG-300-3PTC **\$84.95**

Uninterruptible Power Supply

Some of the best in-home protection for home computers or other equipment that needs back-up power is the use of an uninterruptible power supply (UPS). This unit supplies power through a battery, to protect against electrical outages. Members may purchase a UPS in a range of configurations, depending on the amount of equipment needing battery back-up.

APC BACKUPS **\$99.95**
